

2 open positions as Software developer & Algorithm / AI-specialist

in Medical Technology

Would you like to help shaping tomorrow's care of patients?
Do you not shy away from medical technology?
Do you work hands-on and fit well into a start-up company?

Welcome on board!

We are a young company (founded 2016) with the mission to revolutionize the care of chronic patients with our intelligent gait analysis solutions. We work closely together with scientists from medicine and technology.

You will be working with a future-oriented and innovative company in a multidisciplinary team with start-up spirit and flexible working conditions.

Who are we looking for?

More important to us than individual technologies is your willingness to familiarize with new tasks and technologies. Nevertheless, some of the following skills should not be completely new to you:

- Java / Kotlin
- Android / iOS App development
- Interface development (UX oriented)
- Signal processing
- Machine learning
- Data science
- Biomedical engineering

Beyond that, familiarity with basic web development and python is beneficial.

We are looking forward to receiving your application!
